

Casey Sledge, P.E. CFM

For more than 25 years, Casey Sledge has successfully delivered hundreds of public construction projects under schedule and under budget to Texas cities and schools. Since 2004, Sledge Engineering, LLC (TX Engineering Registration # F-7769) has provided education and project consulting services that have resulted in projects that schools and cities are proud to call their own.

Mr. Sledge, who was a vested city employee before starting his company, learned the value of proper infrastructure planning early on. He understands the complexities of managing all types of City infrastructure better than others who have never worked for a local government. Because of this practical background, he ensures his company focuses on the long term results of each project. The goal: to make sure that each project is the best use of the public's money. The Sledge Process enables Cities and top executives to develop a legacy document that future Councils and staff will embrace.

His success is due to his unique infrastructure experience, prioritization techniques, and risk management strategies that any city can implement. The result is a reduction of inefficiencies that save taxpayer money and avoid the city potential embarrassment.

Mr. Sledge is married and the father of four children. The family spends time together camping and traveling. Mr. Sledge has been a volunteer youth sports coach for many years.
